

## DigitALAD project

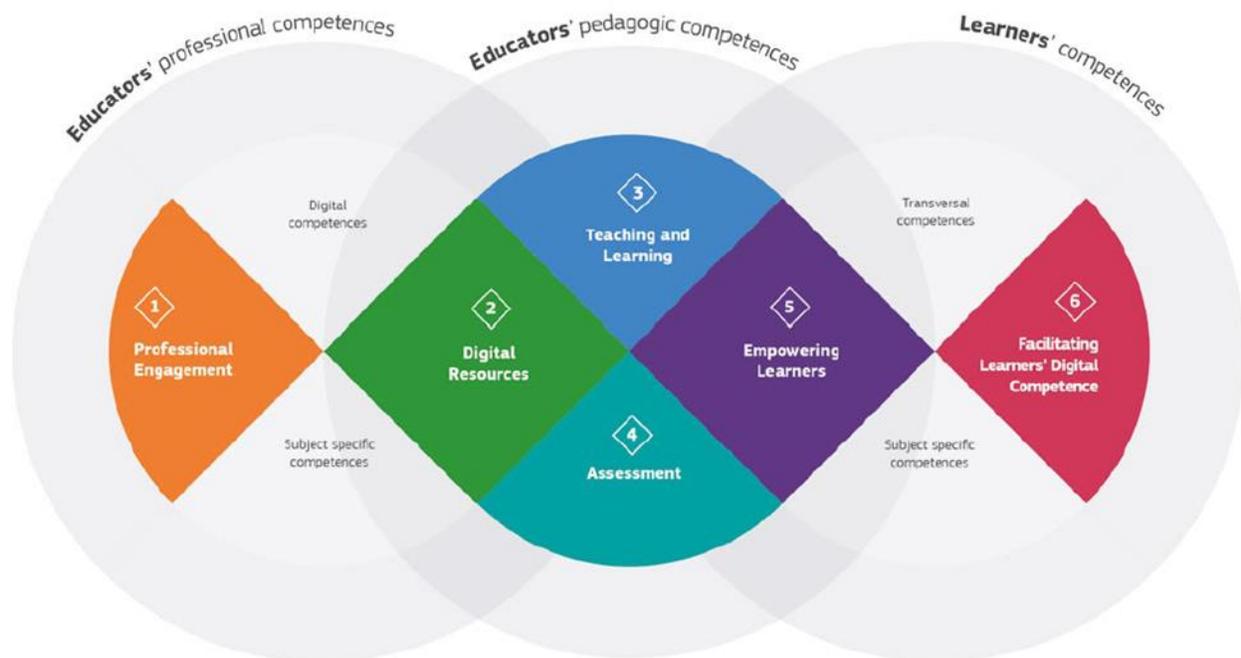

### Digital Adult Educators: Preparing Adult Educators for a Digital World

#### 2<sup>nd</sup> Newsletter

#### So, what are digital skills?

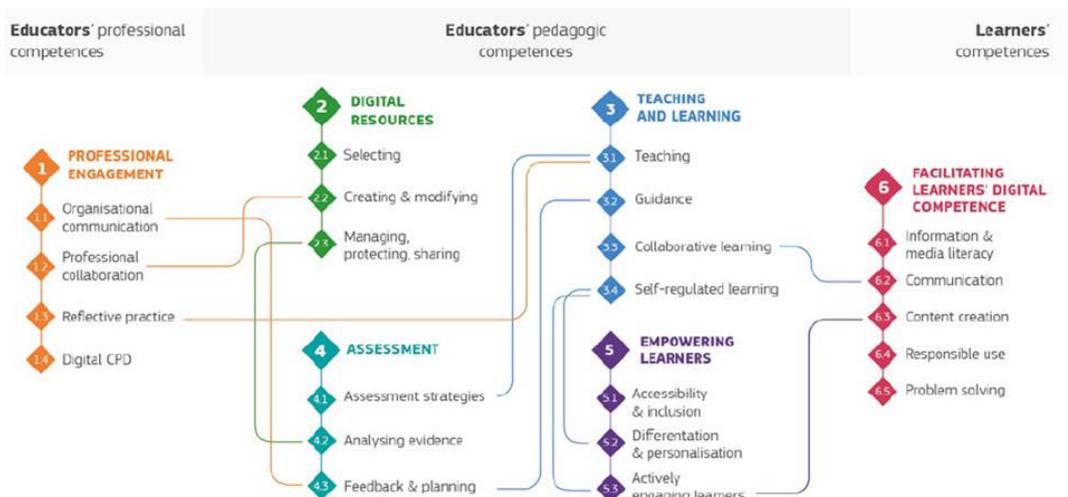

From our research, we came to the conclusion that we talk much about digital skills but there is not really consensus to what we refer to, or how we perceive them in practice. For every one of us, digital skills could be differently important according to our daily habits. Until the Digital Competence Framework for Educators carried out by European Commission came to put things in order.

This Framework consists of six competence areas in three levels concerning the acquisition of 22 competences. These numerous competences clearly indicate the complex role of educators. Through the dedication of their teaching practice, they have a responsibility to pass on their expertise as well as digital competences for life and employability to their aspired learners.

DigitALAD project partners have developed this handbook, which aims to provide adult educators & trainers with the required digital skills in order to be competent as professionals. It is an easy-to-use package emphasising the importance of being digitally literate and it provides practical ways to apply the key competences in practice. It can also be used as a guide for them to keep digital efforts upgraded and aligned with modern practices. In other words, it is the “bible” of DigitALAD project.

Access the Handbook [here!](#)
